

NEW 3A APPROVED SANITARY T40600

RHINO VENT

**If you drop it
DON'T TOSS IT!**

Not fragile, like other vents. All parts are made of tough, chemical resistant materials. Working temperature range is from -40 F to 250 F.

The "Rhino Vent" is designed to allow air pressure to completely exhaust the tanker while loading at speeds of 160 GPM. If you need more air flow: Add a second or third vent to the lid. It fits in a standard 3" threaded bevel seat opening.

In transport, the baffles will reduce spillage from surge. It will safely moderate air pressure and vacuum to atmospheric conditions.

Try our optional press on stainless steel dust cover for exposed applications. To reduce even more spillage, stack the vents vertically with our stainless steel adapter fitting.

Call your local liquid food transportation service center or parts dealer for more information.
